#### Stakeholder Needs

The SeaLion Mission Concept of Operations (ConOps) is guided by a series of stakeholder needs, listed below.

## 1.1: Primary Mission Objective A1

The SeaLion mission shall establish UHF communication link with Virginia ground station

# 1.2: Primary Mission Objective A2

The SeaLion mission shall establish S-Band communication link with MC3 ground station

#### 1.3: Primary Mission Objective A3

The SeaLion mission shall successfully transmit "mission data" defined above to ground stations on the Earth.

# 1.4: Primary Mission Objective A4

The SeaLion mission shall adhere to CubeSat standards as per CDS Rev. 13

#### Reference:

• CubeSat Design Specification Rev. 13

## 1.5: Primary Mission Objective A5

The SeaLion mission shall validate the operation of the Impedance Probe (IP) as a primary payload in-orbit.

## 2.1: Secondary Mission Objective B1

The SeaLion mission shall provide a means to validate a Multi-spectral Sensor (Ms-S) inorbit

#### 2.2: Secondary Mission Objective B2

The SeaLion mission shall provide a means to validate a deployable composite structure (DeCS) in-orbit

#### 3.1: Tertiary Mission Objective C1

The SeaLion mission shall qualify on-orbit the deployment and functioning of the newly developed UHF antenna system and its deployment.

### 3.2: Tertiary Mission Objective C2

The SeaLion mission shall qualify a CubeSat bus architecture for very-low Earth orbit (VLEO)

## 3.3: Tertiary Mission Objective C3

The SeaLion shall verify DeCS in-orbit behavior performance via accelerometer & temperature sensor data

# **User Stories**

The SeaLion Mission Concept of Operations (ConOps)'s stakeholder needs are then used to identify a series of user stories which then lead to design decisions captured in data structure and activity definitions.

### 1: Ping Satellite

As a **Ground Station Operator** I want to **Ping satellite** so that I can **Establish** communication link with satellite.

#### **Example:**

Ping the satellite in order to establish UHF communication link with Virginia ground station

#### **Derived From:**

Primary Mission Objective A1

#### 2: View Satellite Health Data Packet

As a **Ground Station Operator** I want to **View satellite health data packet** so that I can **Validate that satellite is operating nominally**.

#### **Example:**

View satellite health data packet in order to validate the mission data of the IP and DeCS payloads

#### **Derived From:**

- Primary Mission Objective A2
- Primary Mission Objective A3
- Tertiary Mission Objective C3

#### 2.1: Listen for Satellite Beacon

As a **Ground Station Operator** I want to **Open ground station beacon monitor** so that I can **View satellite health data packet**.

#### **Example:**

Open ground station beacon monitor to listen for satellite health data packet downlink

### **Derived From:**

View Satellite Health Data Packet

## 3: Update Beacon Rate

As a Ground Station Operator I want to Update Beacon Rate so that I can Conserve power budget.

## **Example:**

Update beacon rate to transmit every 30 minutes to conserve power

#### **User stories as Use Case Diagram**

# **Data Structures**

This section covers each data structure type in the **SeaLion Mission Concept of Operations** (ConOps).

#### **Satellite Health Data Packet**

**Purpose:** Data structure for satellite health data packet from ground station operator's viewpoint.

```

Field	Туре	Item Type	Description	Source
imu_gyro_x	float		The angular rate of the body with to respective to the x-axis in the IMU's reference frame.	
imu_gyro_y	float		The angular rate of the body with to respective to the y-axis in the IMU's reference frame.	
imu_gyro_z	float		The angular rate of the body with to respective to the z-axis in the IMU's reference frame.	

Field	Туре	Item Type	Description	Source
imu_magnetomet er_x	float		The magnetic field strength with respective to the x-axis in the IMU's reference frame.	
imu_magnetomet er_y	float		The magnetic field strength with respective to the y-axis in the IMU's reference frame.	
imu_magnetomet er_z	float		The magnetic field strength with respective to the z-axis in the IMU's reference frame.	
battery_voltage	float		Voltage of the battery. Units in volts.	
battery_current	float		Current draw of the battery. Units in milliamps.	
temperature_imu	float		The temperature of the IMU. Units in Kelvin.	
temperature_batt ery	float		The temperature of the battery. Units in Kelvin.	
temperature_on_ board_computer	float		The temperature of the on board computer. Until in Kelvin.	
temperature_proc essor	float		The temperature of the processor. Units in Kelvin.	
time_stamp	float		Time stamp of the last transmission.	

Field	Туре	Item Type	Description	Source
boot_count	float		Number of times the computer has rebooted.	
boot_time	float		The time stamp when the computer last booted.	
operational_statu s_of_equipment	float		The operation status of the equipment.	
redundancy_statu s	float		The redundancy status of the satellite.	
altitude_data	float		The altitude data of the satellite.	
lattitude	float		Lattitude coordinate of the satellite.	
longitude	float		Longitude coordinate of the satellite.
